

Allopurinol - Chronic Gout Treatment: What You need to know About Allopurinol

Allopurinol (which goes by the brand names Aloprim and Zyloprim) is a drug that belongs to a class of drugs called xanthine oxidase inhibitors. Allopurinol is prescribed for the treatment of chronic **gout** and also can be used to prevent rather than treat **gout attacks**.

The medicine works by blocking **uric acid** production. **Uric** acid is a waste product typically present in the blood as a result of the breakdown of **purines**. Excessive amounts of uric acid can cause crystals to form in the joints, which can lead to gout.

When is Allopurinol Prescribed?

Allopurinol is prescribed to prevent longterm gout attacks, manage high **uric acid levels** caused by cancer medications, and also handle kidney stones. There are also a number of off-label uses for which your doctor may prescribe allopurinol.

What is the Accessibility to Allopurinol?

Allopurinol is available as a 100 mg. pill. It is taken a couple of times daily, usually carrying out a meal.

Are There Any Special Directions Concerning How to Take Allopurinol?

Patients are advised to follow the prescribing instructions exactly. It is common for the starting serving of allopurinol being low and gradually increased. Noticeable benefit from taking allopurinol may take months. In fact, during the first few months of use, the medication may actually increase the number of gout attacks. Eventually, allopurinol will prevent gout episodes. In the interim, colchicine may be prescribed as well. Do not stop taking allopurinol even if you're feeling well.

Are There Patients Who Should Not Take Allopurinol?

Patients who are known to be allergic to allopurinol obviously should not take the medication. Patients taking any of the following medications should notify their particular doctor simply because they may require a dosage adjustment:

AmoxicillinAmpicillinCoumadinCytoxanPurinetholDiabineseDiureticsImmunosuppressantsOther gout medicationsWhat common side effects can occur with allopurinol?

- Allopurinol can cause upset stomach, diarrhea, and drowsiness.
- Rash is one of the more common side effects and can occur even with months or years of treatment.
