

# Canada Pharmacy Online Worried about Gout Risks in Youngsters

**G**out can be one of the most troubling rheumatic diseases which is supposed to start in men in the age group of 40 to 50 years. However, binge drinking has resulted in a spurt of **gouty arthritis** among children mostly in their 20's and early 30's. Many such cases were admitted in order to emergency wards, and Canada Pharmacy Online is worried similar results may occur in several other places as well.

## Diets Rich in Alcohol and Meat Leading to Gout

Gout is actually caused basically because excess **uric acid** collects in the blood. People experience extreme arthritis, especially in the joints related to inflammation and pain. It generally happens in the wrists, big toes, and ankles. Around 80% of gout cases are seen in men, while women usually experience the disease during menopause.

Experts are of the opinion that gout risks among kids are increasing because of their sedentary lifestyles and diet rich in meat and alcohol. Gout has been related to proper functioning of the kidneys. Excess alcohol consumption is likely to force the kidneys to malfunction through making it can not excrete excess level of **uric acid** formed in the body.

Also, excess uric acid formed as a result of alcohol consumption crystallizes and forms deposits in the tendons, joints, as well as surrounding muscle tissue. Canada Pharmacy Online feels binge drinking is also responsible for increasing the risk of youngsters getting early liver damage as well as developing high blood pressure as well. Gout No Longer Strikes Only the Old.

## Gout Has Been Gaining Ground in the UK and United States as Well

There used to be a time when gout was prevalent among people in their 50s, but the number of cases striking people in their Thirties and even less has increased drastically over the years. Obesity has been a major factor in the growing obesity rate, and it increased by around 17% annually. An increasing number of people get Colcrys to deal with extreme pain associated with gout.

Study was conducted in the United States where 47,000 men realized that gaining weight in excess of two stone after they turn 21 years old literally doubled the risk of all of them getting gout. In the same way, overweight people following shedding fat reduce their chances of getting gout by a significant 40 percent.

## Risk of Getting Other Medical Conditions When Gout Strikes Youngsters

Youngsters getting gout may also increase the risk of acquiring other medical conditions, and risk factors are not limited by men alone. For women who live usually increased risk of acquiring gout throughout menopause. However, hormone replacement therapy (HRT) does reduce the risk. In another study, women having undergone HRT had almost 24% much less uric acid. Even though these results helped set up positive results, gout does increase the risk of several other ailments in the event that left unattended.

Should send warning of more serious medical conditions like type 2 diabetes and high blood pressure. Youngsters getting gout due to lifestyle habits like alcohol usage, fatty foods, and very little exercise must warn others as well. Big Mountain Pharmacy says it is time to take necessary precautions of avoiding lifestyle diseases by implementing simple and healthy changes that go a long way in preventing diseases like gout.
