

How Do you know If you have Gout?

Download this image from Dreamstime.com.

Do you enjoy consuming red meat, beer, red wine, excessive amounts of alcohol, rich sauces, seafood, organ meats, anchovies, herring, asparagus, and/or mushrooms? If so, you may be at risk of getting a **gout attack**. What exactly is **gout**?

Gout, a kind of arthritis, is caused by a build-up of sharp, needle-shaped urate crystals in the joint. These crystals are responsible for the pain and inflammation connected with this condition. The increase in **uric acid** is caused by raised **uric acid levels** in the bloodstream. The foods listed above are rich in purines, which are also naturally found in the body, and these **purines** tend to be broken down to **uric acid**. Under normal circumstances, uric acid is excreted through the kidneys and urine. When the body produces a lot of uric acid, a person consumes a lot of purines in their diet or the filtering system are not properly removing enough uric acid, there is an excessive amount of uric acid leading to a gout attack.

How Would You Know If You Have Gout?

Typical display includes a person who wakes up in the middle of the night or in the morning with a sudden onset of a red, hot, swollen joint with no previous injury or trauma. Gout most commonly affects the big toe joint in the base. However, it can also affect other joints such as the midfoot, ankle, knee, elbow, hands as well as wrists. To begin with along with the first or second gout strike, the joint will appear normal on a regular X-ray. However over time with frequent gout assaults, the affected joint will have limited movement, a bony prominence and will show up as a damaged joint (arthritis) on an X-ray.

Who is a Risk?

Men have a higher rate of sustaining a gout attack but menopausal women are also prone to this painful condition. Also individuals with uncontrolled high blood pressure, diabetes, increased cholesterol levels as well as heart disease are also susceptible to gout. Medications such as diuretics and also low-dose aspirin also increase uric acid levels. Finally, a purine-rich diet of the above mentioned foods and excessive alcohol consumption can lead to a gout attack. Therefore, reduction includes limiting purine consumption in the diet, limiting alcohol consumption, and being healthy and active.

How is It Treated?

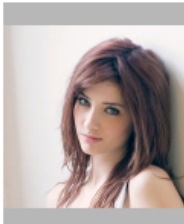

You experience the symptoms of a sudden onset of a red, hot, swollen joint, call your doctor immediately. If you go through the attack in the foot or even ankle, call your local podiatrist but if in additional joints, you ought to call a person primary care doctor, orthopedist or rheumatologist. When left untreated, you could produce firm nodules called tophi under the skin or kidney stones. Your doctor will take a great X-ray of the joint, but as mentioned most likely the films will be normal especially with the first or second attack.

Blood Testing for Uric Acid is Unreliable for Gout

Definitive confirmation of gout involves acquiring shared fluid and having it analyzed for the presence of the urate crystals. Treatment consists of non-steroidal anti-inflammatory drugs (NSAIDs), a cortisone injection, oral steroidal drugs, and/or a medication called colchicine. When you go through recurrent gout attacks, you may be prescribed Allopurinol or perhaps Probenicid - long-term medications just to stop future gout attacks.
